

DATA SECURITY

AYSO VALUES YOUR TRUST!

Your information is safe with us.

- Data is not stored locally but on high end network and database servers at the National Support & Training Center (NSTC)
- The NSTC network is protected by an industry-standard firewall designed and installed by Cisco certified professionals.
- Data sent to and from the NSTC passes through secure channels of the internet (<https://>)
- Sensitive personal identifying information is encrypted at the time of entry and remains so using 128-bit SSL encryption technology.
- SSN and DL# are obscured from view on all screens and printed reports (except for personnel in the Safe Haven Department at the NSTC where checks are run).
- Access to information in the AYSO system is tightly controlled and limited only to AYSO trained and certified volunteers who have a legitimate need to see it based on their position and their need to efficiently run their local program.
